Computer Controlled Biodiesel Process Unit, with SCADA and PID Control

**Key features:**

- **Advanced Real-Time SCADA and PID Control.**
- **Open Control + Multicontrol + Real-Time Control.**
- **Specialized EDIBON Control Software based on LabVIEW.**
- **National Instruments Data Acquisition board (250 KS/s, kilo samples per second).**
- **Calibration exercises, which are included, teach the user how to calibrate a sensor and the importance of checking the accuracy of the sensors before taking measurements.**
- **Projector and/or electronic whiteboard compatibility allows the unit to be explained and demonstrated to an entire class at one time.**
- **Capable of doing applied research, real industrial simulation, training courses, etc.**
- **Remote operation and control by the user and remote control for EDIBON technical support, are always included.**
- **Totally safe, utilizing 4 safety systems (Mechanical, Electrical, Electronic & Software).**
- **Designed and manufactured under several quality standards.**
- **Optional ICAI software to create, edit and carry out practical exercises, tests, exams, calculations, etc. Apart from monitoring user's knowledge and progress reached.**
- **This unit has been designed for future expansion and integration. A common expansion is the EDIBON Scada-Net (ESN) System which enables multiple students to simultaneously operate many units in a network.**

For more information about Key Features, click here
The Computer Controlled Biodiesel Process Unit, “EBDC”, developed by EDIBON, is a unit which allows the study of the biodiesel production cycle different stages. Different parameters that affect the whole process, as well as the obtained biodiesel quality, may also be studied.

Biodiesel is a biological and renewable fuel. It is obtained from used or raw vegetable oils or animal fats. It is used in automobile engines as a substitute of the conventional fossil origin gas-oil.

Its main advantages are related to energy and the environment. Among the energy related advantages, we can mention that biodiesel constitutes a help for the energy diversification and farming sector activation. And among the environmental advantages we can mention the recycling of a residue such as used oil, or regarding the greenhouse effect, the fixation of the CO₂ emitted in the biodiesel combustion during the growth of the crops.

Nevertheless, despite these benefits and the administrative support, biofuels have a long way to cover in order to strengthen their market position against petroleum products, which are perfectly integrated in the system, having been used for more than a century. Some of their goals are:

- optimizing the production process, increasing the value of the great amounts of generated byproducts, encouraging higher productivity crops without competition in the food sector, supervising the application of specifications, carrying out information and promotion campaigns, and obtaining the backing of vehicles and components’ manufacturers.

The Computer Controlled Biodiesel Process Unit, “EBDC", produces biodiesel from vegetable oil and allows the user to analyze the process and all the variables involved.

**No INTRODUCTION**

The process carried out by the Computer Controlled Biodiesel Process Unit, “EBDC", consists on transforming the fatty acids contained in vegetable oils into a high energy content biofuel.

Basically, the process consists of two well-defined stages:

**Stage I: Mixing the products with the stirring technique.** It consists on combining and stirring the raw materials required to make biodiesel (vegetable oil and a catalyst) under a homogeneous heating provided by a computer controlled heating element. This stage is carried out in a reactor made of polyethylene that includes a temperature sensor and level switches to guarantee a safe operation. The stirring consists in recycling the product driven by a computer controlled pump.

**Stage II: Separating and washing the products obtained.** A second stage fundamental after the reaction is the separation of the main product from the rest of by-products. It is usually done with a first two-phase decantation, thanks to the conical shape of the reactor, to remove the glycerin and a biodiesel washing through ion exchange resin.

Finally, the efficiency of the unit and the quality of the biodiesel can be assessed thanks to a load cell installed on the unit and a titration kit (pipettes, droppers, etc.).

This Computer Controlled Unit is supplied with the EDIBON Computer Control System (SCADA), and includes: The unit itself + a Control Interface Box + a Data Acquisition Board + Computer Control, Data Acquisition and Data Management Software Packages, for controlling the process and all parameters involved in the process.

**GENERAL DESCRIPTION**

**No PROCESS DIAGRAM AND UNIT ELEMENTS ALLOCATION**

2 actuators and 4 sensors controlled from any computer, and working simultaneously

**No OPEN CONTROL + MULTICONTROL REAL TIME CONTROL**
With this unit there are several options and possibilities:
- Main items: 1, 2, 3, 4, 5 and 6.
- Optional items: 7, 8, 9, 10 and 11.

Let us describe first the main items (1 to 6):

**EBDC. Unit:**
Anodized aluminum frame and panels made of painted steel.
The unit includes wheels to facilitate its mobility.
Main metallic elements made of stainless steel.
Diagram in the front panel with distribution of the elements similar to the real one.
Recirculation hose made of specific polymer for fuels.
Venturi tube made of polymer resistant to chemicals and fuels.
Filter made of cellulose with pore size of 10 microns.
Purification compartment with ion exchange resin.

**Computer controlled single-phase pump specific for diesel oil:**
Inside made of stainless steel.
Gaskets made of polymer resistant to chemicals and fuels.
Maximum flow rate: 80 l/min.
Maximum head: 25 m.

**Reactor tank:**
Conical vessel made of high density polyethylene resistant to fuels.
Lower outlet for decantation.
Capacity: 120 l.
Includes:
- Computer controlled heating element of 1.5 kW.
- Two level switches made of polymer resistant to fuels.
- "J" type temperature sensor.
- Glycerin outlet tube and drain tap made of stainless steel.

**Oil tank:**
Vessel made of high density polyethylene resistant to fuels.
Capacity: 130 l.
Includes:
- Removable funnel with cover.
- Mesh filter for solid particles.

**Methyelate tank:**
Vessel made of high density polyethylene resistant to chemicals.
Includes:
- Lower tap to regulate the flow of product to be added.
- Graduated volumetric scale up to 10 l.

**Glycerin tank:**
Vessel made of high density polyethylene resistant to fuels.
Capacity: 25 l.
Includes:
- Lower tap with adjustable flow.
- Graduated scale up to 25 l.

**Biodiesel tank:**
Vessel made of high density polyethylene resistant to fuels.
Capacity: 60 l.
Includes:
- Lower tap with adjustable flow.
- Graduated scale up to 60 l.

**Instrumentation:**
Load cell to measure the biodiesel and glycerin mass obtained; range: 0 - 75 Kg.
pH sensor to study the quality of the biodiesel obtained; range: 0 - 14 pH.
Pressure sensor; range: 0 - 6 bar.

**Titration kit:**
Suitable bottle for methanol.
Bottle for titrant.
Four droppers of 7 ml.
Three glasses of 250 ml.
Pipette of 10 ml with hand pump.
Plastic wash bottle of 500 ml.

The complete unit includes as well:
**Advanced Real-Time SCADA and PID Control.**
Open Control + Multicontrol + Real-Time Control.
Specialized EDIBON Control Software based on LabVIEW.
National Instruments Data Acquisition board (250 KS/s, kilo samples per second).
Calibration exercises, which are included, teach the user how to calibrate a sensor and the importance of checking the accuracy of the sensors before taking measurements.
Projector and/or electronic whiteboard compatibility allows the unit to be explained and demonstrated to an entire class at one time.
Capable of doing applied research, real industrial simulation, training courses, etc.
Remote operation and control by the user and remote control for EDIBON technical support, are always included.
Totally safe, utilizing 4 safety systems (Mechanical, Electrical, Electronic & Software).
Designed and manufactured under several quality standards.
Optional ICAI software to create, edit and carry out practical exercises, tests, exams, calculations, etc. Apart from monitoring user's knowledge and progress reached.
This unit has been designed for future expansion and integration. A common expansion is the EDIBON Scada-Net (ESN) System which enables multiple students to simultaneously operate many units in a network.
EBDC/CIB. Control Interface Box:
The Control Interface Box is part of the SCADA system.

Control interface box with process diagram in the front panel and with the same distribution that the different elements located in the unit, for an easy understanding by the student.

All sensors, with their respective signals, are properly manipulated from -10V. to +10V. computer output.

Sensors connectors in the interface have different pines numbers (from 2 to 16), to avoid connection errors.

Single cable between the control interface box and computer.

The unit control elements are permanently computer controlled, without necessity of changes or connections during the whole process test procedure.

Simultaneous visualization in the computer of all parameters involved in the process.

Calibration of all sensors involved in the process.

Real time curves representation about system responses.

Storage of all the process data and results in a file.

Graphic representation, in real time, of all the process/system responses.

All the actuators’ values can be changed at any time from the keyboard allowing the analysis about curves and responses of the whole process.

All the actuators and sensors values and their responses are displayed on only one screen in the computer.

Shield and filtered signals to avoid external interferences.

Real time PID control with flexibility of modifications from the computer keyboard of the PID parameters, at any moment during the process.

Real time PID and on/off control for pumps, compressors, heating elements, control valves, etc.

Real time PID control for parameters involved in the process simultaneously.

Proportional control, integral control and derivative control, based on the real PID mathematical formula, by changing the values, at any time, of the three control constants (proportional, integral and derivative constants).

Open control allowing modifications, at any moment and in real time, of parameters involved in the process simultaneously.

Possibility of automatization of the actuators involved in the process.

Three safety levels, one mechanical in the unit, another electronic in the control interface and the third one in the control software.

DAB. Data Acquisition Board:
The Data Acquisition board is part of the SCADA system.

PCI Express Data acquisition board (National Instruments) to be placed in a computer slot. Bus PCI Express.

Analog input:
Number of channels= 16 single-ended or 8 differential. Resolution=16 bits, 1 in 65536.

Sampling rate up to: 250 Ks/s (kilo samples per second).
Input range (V)= ± 10 V. Data transfers=DMA, interrupts, programmed I/O. DMA channels=6.

Analog output:
Number of channels=2. Resolution=16 bits, 1 in 65536.
Maximum output rate up to: 900 Ks/s.
Output range (V)= ± 10 V. Data transfers=DMA, interrupts, programmed I/O.

Digital Input/Output:
Number of channels=24 inputs/outputs. D0 or DI Sample Clock frequency: 0 to 100 MHz.

EBDC/CCSOF. PID Computer Control + Data Acquisition + Data Management Software:
The three softwares are part of the SCADA system.

Compatible with actual Windows operating systems. Graphic and intuitive simulation of the process in screen. Compatible with the industry standards.

Registration and visualization of all process variables in an automatic and simultaneous way.

Flexible, open and multicontrol software, developed with actual windows graphic systems, acting simultaneously on all process parameters.

Analog and digital PID control.

PID menu and set point selection required in the whole work range.

Management, processing, comparison and storage of data.

Sampling velocity up to 250 Ks/s (kilo samples per second).

Calibration system for the sensors involved in the process.

It allows the registration of the alarms state and the graphic representation in real time.

Comparative analysis of the obtained data, after the process and modification of the conditions during the process.

Open software, allowing the teacher to modify texts, instructions. Teacher’s and student’s passwords to facilitate the teacher’s control on the student, and allowing the access to different work levels.

This unit allows the 30 students of the classroom to visualize simultaneously all the results and the manipulation of the unit, during the process, by using a projector or an electronic whiteboard.

Cables and Accessories, for normal operation.

Manuals:
This unit is supplied with 8 manuals: Required Services, Assembly and Installation, Interface and Control Software, Starting-up, Safety, Maintenance, Calibration & Practices Manuals.

References 1 to 6 are the main items: EBDC + EBDC/CIB + DAB + EBDC/CCSOF + Cables and Accessories + Manuals are included in the minimum supply for enabling normal and full operation.
1.- Study and performance of tests to determine the appropriate amount of catalyst to be used in the biodiesel generation process (titration).
2.- Familiarization with the operation of a biodiesel production unit during the products reaction, extraction and washing process.
3.- Study of the agitation and mixing level influence on the final quality of the obtained biodiesel.
4.- Study of the washing and purifying stage influence on the final quality of the obtained biodiesel.
5.- Study of the influence of temperature during the vegetable oils preheating and reaction stage on the final quality of the obtained biodiesel.
6.- Analysis and tests to determine the biodiesel quality.

Additional practical possibilities:
7.- Study of vegetable oils transesterification with an alcohol to produce biodiesel.
8.- Sensors calibration.

Other possibilities to be done with this Unit:
9.- Many students view results simultaneously.
   To view all results in real time in the classroom by means of a projector or an electronic whiteboard.
10.-Open Control, Multicontrol and Real Time Control.
11.-The Computer Control System with SCADA and PID Control allow a real industrial simulation.
12.-This unit is totally safe as uses mechanical, electrical and electronic, and software safety devices.
13.-This unit can be used for doing applied research.
14.-This unit can be used for giving training courses to Industries even to other Technical Education Institutions.
15.-Control of the EBDC unit process through the control interface box without the computer.
16.-Visualization of all the sensors values used in the EBDC unit process.
   - By using PLC-PI additional 19 more exercises can be done.
   - Several other exercises can be done and designed by the user.

RECOMMENDED CONSUMABLES (Not included)

- For the production of 60 l of high quality biodiesel (every 24 hours):
  60 l of raw or used oil.
  8 l of methanol.
  Catalyst (liquid methylate NaOH or KOH are recommended).
  Titration indicator.

REQUIRED SERVICES

- Electrical supply: single-phase, 220 V/50 Hz or 110 V/60 Hz.
- Computer.

AVAILABLE VERSIONS

- EBDC. Computer Controlled Biodiesel Process Unit.
- EBDB. Biodiesel Process Unit.

Offered in this catalogue:

Offered in other catalogue:
SCADA and PID Control

**Main screen**

The teacher and the students can calibrate the unit with a password provided by EDIBON. The teacher can restore the factory calibration any time.

**Software for Sensors Calibration**

**Example of screen**

The teacher and the students can calibrate the unit with a password provided by EDIBON. The teacher can restore the factory calibration any time.

---

1. Main software operation possibilities.
2. Sensors displays, real time values, and extra output parameters. **Sensors:** ST = Temperature sensor. SP = Pressure sensor. SF = Load Cell. SpH = pH sensor.
3. Actuators controls. **Actuators:** AR = Heating resistance. AB = Pump. AN = Level Switch.
4. Channel selection and other plot parameters.
5. Real time graphics displays.
Representation in real time of the measured magnitudes. A single graph showing the pressure, pH and temperature.

Heating temperature control is done through a PID control. When the target temperature is reached at the temperature sensor (ST-1), the heating element is turned off.

Representation in real time of the measured magnitudes. Two graphs with pressure and temperature measures.

The flow of product through the unit is controlled by a variable flow pump.
COMPLETE TECHNICAL SPECIFICATIONS (for optional items)

Additionally to the main items (1 to 6) described, we can offer, as optional, other items from 7 to 11. All these items try to give more possibilities for:

a) Industrial configuration. (PLC)
b) Technical and Vocational Education configuration. (ICAI and FSS)
c) Multipost Expansions options. (Mini ESN and ESN)

g) Industrial configuration

PLC. Industrial Control using PLC (it includes PLC-PI Module plus PLC-SOF Control Software):

- PLC-PI. PLC Module:
  Metallic box.
  Circuit diagram in the module front panel.
  Front panel:
  Digital Inputs (X) and Digital Outputs (Y) block:
  16 Digital inputs, activated by switches and 16 LEDs for confirmation (red).
  14 Digital outputs (through SCSI connector) with 14 LEDs for message (green).
  Analog inputs block:
  16 Analog inputs (-10 V to +10 V) (through SCSI connector).
  Analog outputs block:
  4 Analog outputs (-10 V to +10 V) (through SCSI connector).
  Touch screen:
  Multi language function. True type fonts.
  Back panel:
  Power supply connector. Fuse 2A. RS-232 connector to PC. USB 2.0 connector to PC.
  Inside:
  Power supply outputs: 24 Vdc, 12 Vdc, -12 Vdc, 12 Vdc variable.
  Panasonic PLC:
  High-speed scan of 0.33 μsec. for a basic instruction.
  Program capacity of 32 Ksteps, with a sufficient comment area.
  Power supply input (100 to 240 V AC).
  DC input: 16 (24 V DC).
  Relay output: 14.
  High-speed counter.
  Multi-point PID control.
  Digital inputs/outputs and analog inputs/outputs Panasonic modules.
  Communication RS232 wire to computer (PC).
  Dimensions: 490 x 330 x 310 mm. approx. (19.29 x 12.99 x 12.20 inches approx.). Weight: 30 Kg. approx. (66 pounds approx.).

- PLC-SOF. PLC Control Software:
  For this particular unit, always included with PLC supply.
  The software has been designed using Labview and it follows the unit operation procedure and linked with the Control Interface Box used in the Computer Controlled Biodiesel Process Unit (EBDC).

Practices to be done with PLC-PI:

1.- Control of the particular unit process through the control interface box without the computer.
2.- Visualization of all the sensors values used in the particular unit process.
3.- Calibration of all sensors included in the particular unit process.
4.- Hand on of all the actuators involved in the particular unit process.
5.- Realization of different experiments, in automatic way, without having in front the particular unit. (These experiments can be decided previously).
6.- Simulation of outside actions, in the cases do not exist hardware elements. (Example: test of complementary tanks, complementary industrial environment to the process to be studied, etc).
7.- PLC hardware general use.
8.- PLC process application for the particular unit.
9.- PLC structure.
10.- PLC inputs and outputs configuration.
11.- PLC configuration possibilities.
12.- PLC program languages.
b) Technical and Vocational Education configuration

**EBDC/ICAI. Interactive Computer Aided Instruction Software System.**

This complete software package consists of an Instructor Software (EDIBON Classroom Manager - ECM-SOF) totally integrated with the Student Software (EDIBON Student Labsoft - ESL-SOF). Both are interconnected so that the teacher knows at any moment what is the theoretical and practical knowledge of the students.

This software is optional and can be used additionally to items (1 to 6).

- **ECM-SOF. EDIBON Classroom Manager (Instructor Software).**
  ECM-SOF is the application that allows the Instructor to register students, manage and assign tasks for workgroups, create own content to carry out Practical Exercises, choose one of the evaluation methods to check the Student knowledge and monitor the progression related to the planned tasks for individual students, workgroups, units, etc... so the teacher can know in real time the level of understanding of any student in the classroom.

  **Innovative features:**
  - User Data Base Management.
  - Administration and assignment of Workgroup, Task and Training sessions.
  - Creation and Integration of Practical Exercises and Multimedia Resources.
  - Custom Design of Evaluation Methods.
  - Creation and assignment of Formulas & Equations.
  - Equation System Solver Engine.
  - Updatable Contents.
  - Report generation, User Progression Monitoring and Statistics.

- **ESL-SOF. EDIBON Student Labsoft (Student Software).**
  ESL-SOF is the application addressed to the Students that helps them to understand theoretical concepts by means of practical exercises and to prove their knowledge and progression by performing tests and calculations in addition to Multimedia Resources. Default planned tasks and an Open workgroup are provided by EDIBON to allow the students start working from the first session. Reports and statistics are available to know their progression at any time, as well as explanations for every exercise to reinforce the theoretically acquired technical knowledge.

  **Innovative features:**
  - Student Log-In & Self-Registration.
  - Existing Tasks checking & Monitoring.
  - Default contents & scheduled tasks available to be used from the first session.
  - Practical Exercises accomplishment by following the Manual provided by EDIBON.
  - Evaluation Methods to prove your knowledge and progression.
  - Test self-correction.
  - Calculations computing and plotting.
  - Equation System Solver Engine.
  - User Monitoring Learning & Printable Reports.
  - Multimedia-Supported auxiliary resources.

For more information see [ICAI catalogue](http://www.edibon.com/en/files/expansion/ICAI/catalog). Click on the following link:
Mini ESN. EDIBON Mini Scada-Net System.

Mini ESN. EDIBON Mini Scada-Net System allows up to 30 students to work with a Teaching Unit in any laboratory, simultaneously. It is useful for both, Higher Education and/or Technical and Vocational Education.

The Mini ESN system consists of the adaptation of any EDIBON Computer Controlled Unit with SCADA and PID Control integrated in a local network. This system allows to view/control the unit remotely, from any computer integrated in the local net (in the classroom), through the main computer connected to the unit. Then, the number of possible users who can work with the same unit is higher than in an usual way of working (usually only one).

Main characteristics:
- It allows up to 30 students to work simultaneously with the EDIBON Computer Controlled Unit with SCADA and PID Control, connected in a local net.
- Open Control + Multicontrol + Real Time Control + Multi Student Post.
- Instructor controls and explains to all students at the same time.
- Any user/student can work doing "real time" control/multicontrol and visualisation.
- Instructor can see in the computer what any user/student is doing in the unit.
- Continuous communication between the instructor and all the users/students connected.

Main advantages:
- It allows an easier and quicker understanding.
- This system allows you can save time and cost.
- Future expansions with more EDIBON Units.

For more information see Mini ESN catalogue. Click on the following link:
**Main items** (always included in the supply)

Minimum supply always includes:

1. Unit: EBDC. Computer Controlled Biodiesel Process Unit.
2. EBDC/CIB. Control Interface Box.
3. DAB. Data Acquisition Board.
4. EBDC/CCSOF. PID Computer Control + Data Acquisition + Data Management Software.
5. Cables and Accessories, for normal operation.

*IMPORTANT: Under EBDC we always supply all the elements for immediate running as 1, 2, 3, 4, 5 and 6.

---

**Optional items** (supplied under specific order)

- **Industrial configuration**
  - PLC. Industrial Control using PLC (it includes PLC-PI Module plus PLC-SOF Control Software):
    - PCL-PI. PLC Module.
    - EBDC/PLC-SOF. PLC Control Software.

- **Technical and Vocational Education configuration**
  - EBDC/ICAi. Interactive Computer Aided Instruction Software System.
  - EBDC/FSS. Faults Simulation System.

- **Multifunctional Expansions options**
  - Mini ESN. EDIBON Mini Scada-Net System.
  - ESN. EDIBON Scada-Net System.
TENDER SPECIFICATIONS (for main items)

**EBDC. Unit:**
- Anodized aluminum frame and panels made of painted steel. The unit includes wheels to facilitate its mobility. Main metallic elements made of stainless steel.
- Diagram in the front panel with distribution of the elements similar to the real one.
- Recirculation hose made of specific polymer for fuels. Venturi tube made of polymer resistant to chemicals and fuels.
- Filter made of cellulose with pore size of 10 microns.
- Purification compartment with ion exchange resins.

**Computer controlled single-phase pump specific for diesel oil:**
- Inside made of stainless steel.
- Gaskets made of polymer resistant to chemicals and fuels.
- Maximum flow rate: 80 l/min.
- Maximum head: 25 m.

**Reactor tank:**
- Conical vessel made of high density polyethylene resistant to fuels.
- Lower outlet for decantation.
- Capacity: 120 l.
- Includes:
  - Computer controlled heating element of 1.5 kW.
  - Two level switches made of polymer resistant to fuels.
  - “J” type temperature sensor.
  - Glycerin outlet tube and drain tap made of stainless steel.

**Oil tank:**
- Vessel made of high density polyethylene resistant to fuels.
- Capacity: 130 l.
- Includes:
  - Removable funnel with cover.
  - Mesh filter for solid particles.

**Methylate tank:**
- Vessel made of high density polyethylene resistant to chemicals.
- Lower tap to regulate the flow of product to be added.
- Graduated volumetric scale up to 10 l.
- Includes:
  - Lower tap with adjustable flow.
  - Graduated scale up to 25 l.

**Biodiesel tank:**
- Vessel made of high density polyethylene resistant to fuels.
- Capacity: 60 l.
- Includes:
  - Lower tap with adjustable flow.
  - Graduated scale up to 60 l.

**Instrumentation:**
- Load cell to measure the biodiesel and glycerin mass obtained; range: 0 - 75 Kg.
- pH sensor to study the quality of the biodiesel obtained; range: 0 - 14 pH.
- Pressure sensor; range: 0 - 6 bar.

**Titration kit:**
- Suitable bottle for methanol.
- Bottle for titrant.
- Four droppers of 7 ml.
- Three glasses of 250 ml.
- Pipette of 10 ml with hand pump.
- Plastic wash bottle of 500 ml.

**Cables and Accessories:**
- For normal operation.

**Manuals:**
- This unit is supplied with 8 manuals: Required Services, Assembly and Installation, Interface and Control Software, Starting-up, Safety, Maintenance, Calibration & Practices Manuals.

**EBDC/CIB. Control Interface Box:**
- The Control Interface Box is part of the SCADA system. Control interface box with process diagram in the front panel. The unit control elements are permanently computer controlled. Simultaneous visualization in the computer of all parameters involved in the process. Calibration of all sensors involved in the process. Real time curves representation about system responses. All the actuators’ values can be changed at any time from the keyboard allowing the analysis about curves and responses of the whole process. Shield and filtered signals to avoid external interferences. Real time PID control with flexibility of modifications from the computer keyboard of the PID parameters, at any moment during the process. Real time PID control for parameters involved in the process simultaneously. Proportional control, integral control and derivative control, based on the real PID mathematical formula, by changing the values, at any time, of the three control constants (proportional, integral and derivative constants).
- Open control allowing modifications, at any moment and in real time, of parameters involved in the process simultaneously.

**DAB, Data Acquisition Board:**
- The Data Acquisition Board is part of the SCADA system. Data acquisition board with process diagram in the front panel. The unit control elements are permanently computer controlled. Simultaneous visualization in the computer of all parameters involved in the process. Calibration of all sensors involved in the process. Real time curves representation about system responses. All the actuators’ values can be changed at any time from the keyboard allowing the analysis about curves and responses of the whole process. Shield and filtered signals to avoid external interferences. Real time PID control with flexibility of modifications from the computer keyboard of the PID parameters, at any moment during the process. Real time PID control for parameters involved in the process simultaneously. Proportional control, integral control and derivative control, based on the real PID mathematical formula, by changing the values, at any time, of the three control constants (proportional, integral and derivative constants).
- Open control allowing modifications, at any moment and in real time, of parameters involved in the process simultaneously.

**EBDC/CCSOF. PID Computer Control + Data Acquisition + Data Management Software:**
- These softwares are part of the SCADA system. Compatible with the industry standards. Compatible with actual windows graphic systems, acting simultaneously on all process parameters. Analog and digital PID control. PID menu and set point selection required in the whole work range. Management, processing, companion and storage of data.

**Cables and Accessories:**
- For normal operation.

**Manuals:**
- This unit is supplied with 8 manuals: Required Services, Assembly and Installation, Interface and Control Software, Starting-up, Safety, Maintenance, Calibration & Practices Manuals.
Exercises and Practical Possibilities to be done with the Main Items

1.- Study and performance of tests to determine the appropriate amount of catalyst to be used in the biodiesel generation process (titration).
2.- Familiarization with the operation of a biodiesel production unit during the products reaction, extraction and washing process.
3.- Study of the agitation and mixing level influence on the final quality of the obtained biodiesel.
4.- Study of the washing and purifying stage influence on the final quality of the obtained biodiesel.
5.- Study of the influence of temperature during the vegetable oils preheating and reaction stage on the final quality of the obtained biodiesel.
6.- Analysis and tests to determine the biodiesel quality.

Additional practical possibilities:
7.- Study of vegetable oils transesterification with an alcohol to produce biodiesel.
8.- Sensors calibration.

Other possibilities to be done with this Unit:
9.- Many students view results simultaneously.
   To view all results in real time in the classroom by means of a projector or an electronic whiteboard.
10.- Open Control, Multicontrol and Real Time Control.
   This unit allows intrinsically and/or extrinsically to change the span, gains; proportional, integral, derivative parameters; etc., in real time.
11.- The Computer Control System with SCADA and PID Control allow a real industrial simulation.
12.- This unit is totally safe as uses mechanical, electrical and electronic, and software safety devices.
13.- This unit can be used for doing applied research.
14.- This unit can be used for giving training courses to Industries even to other Technical Education Institutions.
15.- Control of the EBDC unit process through the control interface box without the computer.
16.- Visualization of all the sensors values used in the EBDC unit process.
   - By using PLC-PI additional 19 more exercises can be done.
   - Several other exercises can be done and designed by the user.
TENDER SPECIFICATIONS (for optional items)

a) Industrial configuration

PLC. Industrial Control using PLC (It includes PLC-PI Module plus PLC-SOF Control Software):

-PLC-PI. PLC Module:
  Metallic box.
  Circuit diagram in the module front panel.
  Digital inputs (X) and Digital outputs (Y) block: 16 Digital inputs. 14 Digital outputs.
  Analog inputs block: 16 Analog inputs.
  Analog outputs block: 4 Analog outputs.
  Touch screen.
  Panasonic PLC:
  High-speed scan of 0.32 µsec. Program capacity of 32 Kateps. High-speed counter. Multi-point PID control.
  Digital inputs/outputs and analog inputs/outputs Panasonic modules.

-EBDC/PLC-SOF. PLC Control Software:
  For this particular unit, always included with PLC supply.

Practices to be done with PLC-PI:
1. Control of the particular unit process through the control interface box without the computer.
2. Visualization of all the sensors values used in the particular unit process.
3. Calibration of all sensors included in the particular unit process.
4. Hand on of all the actuators involved in the particular unit process.
5. Realization of different experiments, in automatic way, without having in front the particular unit. (These experiments can be decided previously).
6. Simulation of outside actions, in the cases do not exist hardware elements. (Example: test of complementary tanks, complementary industrial environment to the process to be studied, etc).
7. PLC hardware general use.
8. PLC process application for the particular unit.
9. PLC structure.
10. PLC inputs and outputs configuration.
11. PLC configuration possibilities.
12. PLC program languages.
13. PLC different programming standard languages (ladder diagram (LD), structured text (ST), instructions list (IL), sequential function chart (SFC), function block diagram (FBD)).
14. New configuration and development of new process.
15. Hand on an established process.
16. To visualize and see the results and to make comparisons with the particular unit process.
17. Possibility of creating new process in relation with the particular unit.
18. PLC Programming Exercises.
19. Own PLC applications in accordance with teacher and student requirements.

b) Technical and Vocational Education configuration

EBDC/ICA. Interactive Computer Aided Instruction Software System.

This complete software package consists of an Instructor Software (EDIBON Classroom Manager - ECM-SOF) totally integrated with the Student Software (EDIBON Student Labsoft - ESL-SOF). Both are interconnected so that the teacher knows at any moment what is the theoretical and practical knowledge of the students.

ECM-SOF. EDIBON Classroom Manager (Instructor Software):
- User Data Base Management.
- Administration and assignment of Workgroup, Task and Training sessions.
- Creation and Integration of Practical Exercises and Multimedia Resources.
- Custom Design of Evaluation Methods.
- Creation and assignment of Formulas & Equations.
- Equation System Solver Engine.
- Updatable Contents.
- Report generation, User Progression Monitoring and Statistics.

ESL-SOF. EDIBON Student Labsoft (Student Software):
ESL-SOF is the application addressed to the Students that helps them to understand theoretical concepts by means of practical exercises and to prove their knowledge and progression by performing tests and calculations in addition to Multimedia Resources. Default planned tasks and an Open workgroup are provided by EDIBON to allow the students start working from the first session. Reports and statistics are available to know their progression at any time, as well as explanations for every exercise to reinforce the theoretically acquired technical knowledge.

Innovative features:
- Student Log-In & Self-Registration.
- Existing Tasks checking & Monitoring.
- Default contents & scheduled tasks available to be used from the first session.
- Practical Exercises accomplishment by following the Manual provided by EDIBON.
- Evaluation Methods to prove your knowledge and progression.
- Test self-correction.
- Calculations computing and plotting.
- Equation System Solver Engine.
- User Monitoring Learning & Printable Reports.
- Multimedia-Supported auxiliary resources.
c) Multipost Expansions options

Mini ESN. EDIBON Mini Scada-Net System.

EDIBON Mini Scada-Net System allows up to 30 students to work with a Teaching Unit in any laboratory, simultaneously. The Mini ESN system consists of the adaptation of any EDIBON Computer Controlled Unit with SCADA and PID Control integrated in a local network. This system allows to view/control the unit remotely, from any computer integrated in the local net (in the classroom), through the main computer connected to the unit.

Main characteristics:
- It allows up to 30 students to work simultaneously with the EDIBON Computer Controlled Unit with SCADA and PID Control, connected in a local net.
- Open Control + Multicontrol + Real Time Control + Multi Student Post.
- Instructor controls and explains to all students at the same time.
- Any user/student can work doing “real time” control/multicontrol and visualisation.
- Instructor can see in the computer what any user/student is doing in the unit.
- Continuous communication between the instructor and all the users/students connected.

Main advantages:
- It allows an easier and quicker understanding.
- This system allows you can save time and cost.
- Future expansions with more EDIBON Units.

The system basically will consist of:
- This system is used with a Computer Controlled Unit.
- Instructor’s computer.
- Students’ computers.
- Local Network.
- Unit-Control Interface adaptation.
- Unit Software adaptation.
- Webcam.
- Mini ESN Software to control the whole system.
- Cables and accessories required for a normal operation.

Specifications subject to change without previous notice, due to the convenience of improvement of the product.
