**Key features:**

- **Advanced Real-Time SCADA.**
- **Open Control + Multicontrol + Real-Time Control.**
- **Specialized EDIBON Control Software based on LabVIEW.**
- **National Instruments Data Acquisition board (250 KS/s, kilo samples per second).**
- **Calibration exercises, which are included, teach the user how to calibrate a sensor and the importance of checking the accuracy of the sensors before taking measurements.**
- **Projector and/or electronic whiteboard compatibility allows the unit to be explained and demonstrated to an entire class at one time.**
- **Capable of doing applied research, real industrial simulation, training courses, etc.**
- **Remote operation and control by the user and remote control for EDIBON technical support, are always included.**
- **Totally safe, utilizing 4 safety systems (Mechanical, Electrical, Electronic & Software).**
- **Designed and manufactured under several quality standards.**
- **Optional ICAI software to create, edit and carry out practical exercises, tests, exams, calculations, etc. Apart from monitoring user’s knowledge and progress reached.**
- **This unit has been designed for future expansion and integration. A common expansion is the EDIBON Scada-Net (ESN) System which enables multiple students to simultaneously operate many units in a network.**

For more information about Key Features, click here
Compression is defined as the change of state between an initial volume $V_0$ and a final volume $V_1$, where $V_0 > V_1$ and, at the same time, the pressure of the system has increased. The work related to the volume change of a gas is called compression work. On the other hand, if volume increases, the gas will be expanded and it is called expansion work.

Single-stage compression consists in converting a volume $V_0$ into a volume $V_1$ in only one stage, whereas multi-stage compression consists in converting a volume $V_0$ into a volume $V_1$ with a number of intermediate volumes $V^*$, depending on the number of compressions, and where the gas temperature increases ($V_0 > \ldots V^* \ldots > V_1$).

The Computer Controlled Two-Stage Compressor Test Unit, “HCDEC”, is a unit that allows for studying single-stage compression and two-stage compression (work efficiency, P-V curves and thermodynamic properties among others). Besides, it allows for studying compression with and without refrigeration in the intermediate stage.

**GENERAL DESCRIPTION**

The Computer Controlled Two-Stage Compressor Test Unit, “HCDEC”, works with compressed air and presents as a principal device a compression bench with two pistons, low and high pressure.

This unit presents four circuits or work dispositions which allow to study the different compression situations.

In the four selectable circuits that the unit presents, it can be identified the similar first stage where the air enters by aspiration of the compressor piston. In this first stage the air pass through a priming vessel where the condensates are collected, the air pass across the flow sensor, temperature sensor and pressure sensor which collect the information through the computer. The first stage presents a pressure gauge and air filter too.

After this first stage, the unit presents different compression situations which offer the data of each compression points through three different temperature and pressure sensors. The unit presents a concentric tubes heat exchanger which cools down the compressed air stream with refrigeration water, two temperature sensors collect the data and allow to do the heat balance calculation in the device, and study the influence of this device over this type of process.

The unit allows for studying different compression situations:

a) Compression in one stage – low pressure piston.

b) Compression in one stage – high pressure piston.

c) Two stages without intercooling.

d) Two stages with intercooling.

All of the circuits present the respective safety systems; relief valves, check valve such as two safety pressure switch.

The compression circuits are selected through the computer. The unit allows the representation of the instantaneous compressed cycle and the measurement of: the power consumed by the compressor, the data of pressure and temperature in every point of the compression and the operation time required to perform the compression.

This Computer Controlled Unit is supplied with the EDIBON Computer Control System (SCADA), and includes: The unit itself + a Control Interface Box + a Data Acquisition Board + Computer Control, Data Acquisition and Data Management Software Packages, for controlling the process and all parameters involved in the process.

**PROCESS DIAGRAM AND UNIT ELEMENTS ALLOCATION**

![HCDEC detail](image_url)
With this unit there are several options and possibilities:
- Main items: 1, 2, 3, 4, 5 and 6.
- Optional items: 7, 8, 9, 10 and 11.
Let us describe first the main items (1 to 6):

**HCDEC. Unit:**

Anodized aluminum frame and panels made of painted steel.
The unit includes wheels to facilitate its mobility.
Main metallic elements made of stainless steel.
Diagram in the front panel with distribution of the elements similar to the real one.

**Priming tank:** Volume: 5 l.

**Two-stage compressor:**
- Power: 4 HP
- Flow: 300 l/min.
- Maximum pressure: 14 bar.

**Four two-ways solenoid valves computer controlled.**
Maximum pressure: 12 bar.
Two pressure tanks of 750 ml and 20 l.
Three three-ways valves to make the circuit selection.
Concentric tube heat exchanger. Cooling capacity: 1580 W.
Three relief valves. Maximum pressure: 10 bar.
Four check valves. Maximum pressure: 10 bar.
Two manual regulation ball valves to drain the condensates.
One ball valve to drain the air.
One ball valve to supply the water refrigeration to the heat exchanger.
Two pressure switches (high and low pressure).

**Instrumentation:**

**Inlet lines to the compressor:**
- Two “J” type temperature sensors at the inlet of the compressing cylinders.
- Two pressure sensors at the inlet of the compressing cylinders, range: 0 – 10 bar.
- Pressure manometer at the inlet of the high pressure compressing cylinder, range: 0 – 16 bar.
- Pressure manometer at the inlet of the low pressure compressing cylinder, range: -1 – 1 bar.
- Two flow sensors at the inlet of the compressing cylinders, range: 500 l/min, 0 – 0.8 Mpa.

**Working circuits:**
- Three “J” type temperature sensors at the outlet of the compressing cylinders and in the tank.
- Three pressure sensors at the outlet of the compressing cylinders and in the tank, range: 0 – 10 bar.
- Pressure manometer in the tank, range: 0 – 16 bar.

**Cooling water circuit:**
- Two “J” type temperature sensors at the inlet and outlet of the heat exchanger.
- Flow sensor at the inlet and outlet of the heat exchanger, range: 0.25 – 6.5 l/min.

The unit is supplied with the required safety devices: safety googles.
The complete unit includes as well:

**Advanced Real-Time SCADA.**
Open Control + Multicontrol + Real-Time Control.
Specialized EDIBON Control Software based on LabVIEW.
National Instruments Data Acquisition board (250 KS/s, kilo samples per second).
Calibration exercises, which are included, teach the user how to calibrate a sensor and the importance of checking the accuracy of the sensors before taking measurements.
Projector and/or electronic whiteboard compatibility allows the unit to be explained and demonstrated to an entire class at one time.
Capable of doing applied research, real industrial simulation, training courses, etc.
Remote operation and control by the user and remote control for EDIBON technical support, are always included.

Totally safe, utilizing 4 safety systems (Mechanical, Electrical, Electronic & Software).
Designed and manufactured under several quality standards.
Optional ICAI software to create, edit and carry out practical exercises, tests, exams, calculations, etc. Apart from monitoring user’s knowledge and progress reached.
This unit has been designed for future expansion and integration. A common expansion is the EDIBON Scada-Net (ESN) System which enables multiple students to simultaneously operate many units in a network.
HCDEC/CIB. Control Interface Box:
The Control Interface Box is part of the SCADA system.
Control interface box with process diagram in the front panel and with the same distribution that
the different elements located in the unit, for an easy understanding by the student.
All sensors, with their respective signals, are properly manipulated from -10V to +10V computer output.
Sensors connectors in the interface have different pins numbers (from 2 to 16), to avoid
connection errors.
Single cable between the control interface box and computer.
The unit control elements are permanently computer controlled, without necessity of
changes or connections during the whole process test procedure.
Simultaneous visualization in the computer of all parameters involved in the process.
Calibration of all sensors involved in the process.
Real time curves representation about system responses.
Storage of all the process data and results in a file.
Graphic representation, in real time, of all the process/system responses.
All the actuators’ values can be changed at any time from the keyboard allowing the
analysis about curves and responses of the whole process.
All the actuators and sensors values and their responses are displayed on only one screen in the
computer.
Shield and filtered signals to avoid external interferences.
Real time computer control with flexibility of modifications from the computer keyboard of
the parameters, at any moment during the process.
Real time computer control for pumps, compressors, heating elements, control valves, etc.
Real time computer control for parameters involved in the process simultaneously.
Open control allowing modifications, at any moment and in real time, of parameters involved in the
process simultaneously.
Three safety levels, one mechanical in the unit, another electronic in the control interface and
the third one in the control software.

DAB. Data Acquisition Board:
The Data Acquisition board is part of the SCADA system.
PCI Express Data acquisition board (National Instruments) to be placed in a computer slot. Bus
PCI Express.
Analog input:
Number of channels= 16 single-ended or 8 differential. Resolution=16 bits, 1 in 65536.
Sampling rate up to: 250 KS/s (kilo samples per second).
Input range (V)= ±10 V. Data transfers=DMA, interrupts, programmed I/O. DMA channels=6.
Analog output:
Number of channels=2. Resolution=16 bits, 1 in 65536.
Maximum output rate up to: 900 KS/s.
Output range(V)= ±10 V. Data transfers=DMA, interrupts, programmed I/O.
Digital Input/Output:
Number of channels=24 inputs/outputs. D0 or DI Sample Clock frequency: 0 to 100 MHz.

HCDEC/CCSOF. Computer Control + Data Acquisition + Data Management Software:
The three softwares are part of the SCADA system.
Compatible with actual Windows operating systems. Graphic and intuitive simulation of the process in
screen. Compatible with the industry standards.
Registration and visualization of all process variables in an automatic and simultaneous way.
Flexible, open and multicontrol software, developed with actual windows graphic systems,
acting simultaneously on all process parameters.
Management, processing, comparison and storage of data.
Sampling velocity up to 250 KS/s (kilo samples per second).
Calibration system for the sensors involved in the process.
It allows the registration of the alarms state and the graphic representation in real time.
Comparative analysis of the obtained data, after the process and modification of the conditions
during the process.
Open software, allowing the teacher to modify texts, instructions, Teacher’s and
student’s passwords to facilitate the teacher’s control on the student, and allowing the access
to different work levels.
This unit allows the 30 students of the classroom to visualize simultaneously all the results
and the manipulation of the unit, during the process, by using a projector or an electronic
whiteboard.

Cables and Accessories, for normal operation.

Manuals:
This unit is supplied with 8 manuals: Required Services, Assembly and Installation, Interface and
Control Software, Starting-up, Safety, Maintenance, Calibration & Practices Manuals.

References 1 to 6 are the main items: HCDEC + HCDEC/CIB + DAB + HCDEC/CCSOF + Cables and Accessories + Manuals are
included in the minimum supply for enabling normal and full operation.
1.- Study of the compression process in a p-V diagram.
2.- Study of the work performed by a two-stage compressor.
3.- Determination of the efficiency of a two-stage compressor.
4.- Study of the pressure ratio and the temperature ratio of a two-stage compressor.
5.- Research on the relative behavior of the compressor for the electrical consumption, power of the shaft and heat losses, with and without intercooler.
6.- Research on the change of the volumetric efficiency against the compression ratio, with and without intercooling.
7.- Research on the change of the isothermal and/or polytrophic efficiency against the compression ratio, with and without intercooling.
8.- Research on the change of the mechanical performance against the compression ratio, with and without intercooling.

Additional practical possibilities:
9.- Study and analysis of the two-stage compression with intercooling by expansion.
10.-Study of the two-stage compression with intercooling by heat exchanger.
11.-Calculation of the inlet air dryness.
12.-Study of the design and function of a two-stage compressor.
13.-Determination of the intake air flow.
14.-Research on the change of the air flow against the compression ratio, with and without intercooler.
15.-Study of the output power of the motor (power of the shaft of the compressor).
16.-Study of the cooling between stages effect on the compressor (power and temperatures of the cycle).
17.-Study of the two-stage compression effect and the interaction between stages on the energy requirements.
18.-Study of the single-stage compression with cooling by expansion.
19.-Study of the single-stage compression without cooling.
20.-Study of the single-stage compression with cooling by heat exchanger.
21.-Study of the heat balance in the heat exchanger.
22.-Sensors calibration.
Other possibilities to be done with this Unit:
23.-Many students view results simultaneously. To view all results in real time in the classroom by means of a projector or an electronic whiteboard.
24.-Open Control, Multicontrol and Real Time Control. This unit allows intrinsically and/or extrinsically to change the span, gains; proportional, integral, derivative parameters; etc, in real time.
25.-The Computer Control System with SCADA allows a real industrial simulation.
26.-This unit is totally safe as uses mechanical, electrical and electronic, and software safety devices.
27.-This unit can be used for doing applied research.
28.-This unit can be used for giving training courses to Industries even other Technical Education Institutions.
29.-Control of the HCDEC unit process through the control interface box without the computer.
30.-Visualization of all the sensors values used in the HCDEC unit process.
- By using PLC-PI additional 19 more exercises can be done.
- Several other exercises can be done and designed by the user.

EXERCISES AND PRACTICAL POSSIBILITIES TO BE DONE WITH THE MAIN ITEMS

REQUIRED SERVICES

- Electrical supply: three-phase, 380 V/50 Hz, 220 V/60 Hz, and minimum power 5 kVA.
- Water supply: 5 to 10 (l/min).
- Computer.

DIMENSIONS AND WEIGHTS

HCDEC:
Unit:
- Dimensions: 770 x 700 x 1400 mm approx.
  (30.31 x 27.55 x 55.11 inches approx.)
- Weight: 125 Kg approx.
  (275 pounds approx.).
Control Interface Box:
- Dimensions: 490 x 330 x 310 mm approx.
  (19.29 x 12.99 x 12.20 inches approx.)
- Weight: 10 Kg approx.
  (22 pounds approx.).
The teacher and the students can calibrate the unit with a password provided by EDIBON. The teacher can restore the factory calibration any time.
Some **real** results obtained from this unit

Selection screen to the operation circuit.

Drop down and intuitive selection.

Study of single stage compression with high pressure piston. P-V diagram representation.

Study of single stage compression with low pressure piston. P-V diagram representation.
Some **real** results obtained from this Unit

Two stage compression. Operation with high and low pressure pistons. Multiple real-time representation of the P-V diagram.

Acquisition data system. Visualization and representation of collected data.

The program represents the P-V compression cycle automatically.
Additionally to the main items (1 to 6) described, we can offer, as optional, other items from 7 to 11. All these items try to give more possibilities for:

a) Industrial configuration. (PLC)
b) Technical and Vocational Education configuration. (ICAI and FSS)
c) Multipost Expansions options. (Mini ESN and ESN)

a) Industrial configuration

PLC. Industrial Control using PLC (it includes PLC-PI Module plus PLC-SOF Control Software):

- PLC-PI. PLC Module:
  Metallic box.
  Circuit diagram in the module front panel.
  Front panel:
  - Digital inputs (X) and Digital outputs (Y) block:
    - 16 Digital inputs, activated by switches and 16 LEDs for confirmation (red).
    - 14 Digital outputs (through SCSI connector) with 14 LEDs for message (green).
  - Analog inputs block:
    - 16 Analog inputs (-10 V. to + 10 V.) (through SCSI connector).
  - Analog outputs block:
    - 4 Analog outputs (-10 V. to + 10 V.) (through SCSI connector).
  - Touch screen:
  - Back panel:
    - Power supply connector. Fuse 2A. RS-232 connector to PC. USB 2.0 connector to PC.
  - Inside:
    - Power supply outputs: 24 Vdc, 12 Vdc, -12 Vdc, 12 Vdc variable.
    - Panasonic PLC:
      - High-speed scan of 0.32 µsec. for a basic instruction.
      - Program capacity of 32 Ksteps, with a sufficient comment area.
      - Power supply input (100 to 240 V AC).
      - DC input: 16 (24 V DC).
      - Relay output: 14.
      - High-speed counter.
      - Multi-point PID control.
  - Digital inputs/outputs and analog inputs/outputs Panasonic modules.
  - Communication RS232 wire to computer (PC).
  - Dimensions: 490 x 330 x 310 mm. approx. (19.29 x 12.99 x 12.20 inches approx.). Weight: 30 Kg. approx. (66 pounds approx.).

- HCDEC/PLC-SOF. PLC Control Software:
  For this particular unit, always included with PLC supply.
  The software has been designed using Labview and it follows the unit operation procedure and linked with the Control Interface Box used in the Computer Controlled Two-Stage Compressor Test Unit (HCDEC).

Practices to be done with PLC-PI:

1.- Control of the particular unit process through the control interface box without the computer.
2.- Visualization of all the sensors values used in the particular unit process.
3.- Calibration of all sensors included in the particular unit process.
4.- Hand on all the actuators involved in the particular unit process.
5.- Realization of different experiments, in automatic way, without having in front the particular unit. (These experiments can be decided previously).
6.- Simulation of outside actions, in the cases do not exist hardware elements. (Example: test of complementary tanks, complementary industrial environment to the process to be studied, etc).
7.- PLC hardware general use.
8.- PLC process application for the particular unit.
9.- PLC structure.
10.- PLC inputs and outputs configuration.
11.- PLC configuration possibilities.
12.- PLC program languages.
13.- PLC different programming standard languages (ladder diagram (LD), structured text (ST), instructions list (IL), sequential function chart (SFC), function block diagram (FBD)).
14.- New configuration and development of new process.
15.- Hand on an established process.
16.- To visualize and see the results and to make comparisons with the particular unit process.
17.- Possibility of creating new process in relation with the particular unit.
18.- PLC Programming Exercises.
19.- Own PLC applications in accordance with teacher and student requirements.
b) Technical and Vocational Education configuration

HCDEC/ICAI. Interactive Computer Aided Instruction Software System.

This complete software package consists of an Instructor Software (EDIBON Classroom Manager - ECM-SOF) totally integrated with the Student Software (EDIBON Student Labsoft - ESL-SOF). Both are interconnected so that the teacher knows at any moment what is the theoretical and practical knowledge of the students.

This software is optional and can be used additionally to items (1 to 6).

- ECM-SOF. EDIBON Classroom Manager (Instructor Software).
ECM-SOF is the application that allows the Instructor to register students, manage and assign tasks for workgroups, create own content to carry out Practical Exercises, choose one of the evaluation methods to check the Student knowledge and monitor the progression related to the planned tasks for individual students, workgroups, units, etc... so the teacher can know in real time the level of understanding of any student in the classroom.

Innovative features:
• User Data Base Management.
• Administration and assignment of Workgroup, Task and Training sessions.
• Creation and Integration of Practical Exercises and Multimedia Resources.
• Custom Design of Evaluation Methods.
• Creation and assignment of Formulas & Equations.
• Equation System Solver Engine.
• Updatable Contents.
• Report generation, User Progression Monitoring and Statistics.

- ESL-SOF. EDIBON Student Labsoft (Student Software).
ESL-SOF is the application addressed to the Students that helps them to understand theoretical concepts by means of practical exercises and to prove their knowledge and progression by performing tests and calculations in addition to Multimedia Resources. Default planned tasks and an Open workgroup are provided by EDIBON to allow the students start working from the first session. Reports and statistics are available to know their progression at any time, as well as explanations for every exercise to reinforce the theoretically acquired technical knowledge.

Innovative features:
• Student Log-In & Self-Registration.
• Existing Tasks checking & Monitoring.
• Default contents & scheduled tasks available to be used from the first session.
• Practical Exercises accomplishment by following the Manual provided by EDIBON.
• Evaluation Methods to prove your knowledge and progression.
• Test self-correction.
• Calculations computing and plotting.
• Equation System Solver Engine.
• User Monitoring Learning & Printable Reports.
• Multimedia-Supported auxiliary resources.

For more information see ICAI catalogue. Click on the following link: www.edibon.com/en/files/expansion/ICAI/catalog
**Mini ESN. EDIBON Mini Scada-Net System.**

Mini ESN. EDIBON Mini Scada-Net System allows up to 30 students to work with a Teaching Unit in any laboratory, simultaneously. It is useful for both, Higher Education and/or Technical and Vocational Education.

The Mini ESN system consists of the adaptation of any EDIBON Computer Controlled Unit with SCADA integrated in a local network.

This system allows to view/control the unit remotely, from any computer integrated in the local net (in the classroom), through the main computer connected to the unit. Then, the number of possible users who can work with the same unit is higher than in a usual way of working (usually only one).

**Main characteristics:**
- It allows up to 30 students to work simultaneously with the EDIBON Computer Controlled Unit with SCADA, connected in a local net.
- Open Control + Multicontrol + Real Time Control + Multi Student Post.
- Instructor controls and explains to all students at the same time.
- Any user/student can work doing “real time” control/multicontrol and visualisation.
- Instructor can see in the computer what any user/student is doing in the unit.
- Continuous communication between the instructor and all the users/students connected.

**Main advantages:**
- It allows an easier and quicker understanding.
- This system allows you can save time and cost.
- Future expansions with more EDIBON Units.

For more information see Mini ESN catalogue. Click on the following link:

*IMPORTANT: Under HCDEC we always supply all the elements for immediate running as 1, 2, 3, 4, 5 and 6.*

c) **Multipost Expansions options**

⑨ **ESN**: EDIBON Mini Scada-Net System.
⑩ **ESN**: EDIBON Scada-Net System.
HCDEC. Unit:
- Anodized aluminum frame and panels made of painted steel.
- The unit includes wheels to facilitate its mobility.
- Main metallic elements made of stainless steel.
- Diagram in the front panel with distribution of the elements similar to the real one.
- Priming tank: Volume: 3 l.
  - Two-stage compressor:
    - Power: 4 HP.
    - Flow: 300 l/min.
    - Maximum pressure: 14 bar.
  - Four two-ways solenoid valves computer controlled.
  - Maximum pressure: 12 bar.
  - Two pressure tanks of 750 ml and 20 l.
  - Three three-ways valves to make the circuit selection.
  - Concentric tube heat exchanger. Cooling capacity: 1580 W.
  - Three relief valves. Maximum pressure: 10 bar.
  - Four check valves. Maximum pressure: 10 bar.
  - Two manual regulation ball valves to drain the condensates.
  - One ball valve to drain the air.
  - One ball valve to supply the water refrigeration to the heat exchanger.
  - Two pressure switches (high and low pressure).

Institutional:
- Inlet lines to the compressor:
  - Two “J” type temperature sensors at the inlet of the compressing cylinders.
  - Two pressure sensors at the inlet of the compressing cylinders, range: 0 – 10 bar.
  - Pressure manometer at the inlet of the high pressure compressor cylinder, range: 0 – 16 bar.
  - Pressure manometer at the inlet of the low pressure compressing cylinder, range: 0 – 1 bar.
  - Two flow sensors at the inlet of the compressing cylinders, range: 500 l/min, 0 – 0.8 Mpa.

Working circuits:
- Three “J” type temperature sensors at the outlet of the compressing cylinders and in the tank.
- Three pressure sensors at the outlet of the compressing cylinders and in the tank, range: 0 – 10 bar.
- Pressure manometer in the tank, range: 0 – 16 bar.

Cooling water circuit:
- Two “J” type temperature sensors at the inlet and outlet of the heat exchanger.
- Flow sensor at the inlet and outlet of the heat exchanger, range: 0.25 – 6.5 l/min.

The unit is supplied with the required safety devices: safety googles.
The complete unit includes as well:
- Advanced Real-Time SCADA.
- Open Control + Multicontrol + Real-Time Control.
- Specialized EDIBON Control Software based on LabVIEW.
- National Instruments Data Acquisition board (250 KS/s, kilo samples per second).
- Calibration exercises, which are included, teach the user how to calibrate a sensor and the importance of checking the accuracy of the sensors before taking measurements.
- Projector and/or electronic whiteboard compatibility allows the unit to be explained and demonstrated to an entire class at one time.
- Capable of doing applied research, real industrial simulation, training courses, etc.
- Remote operation and control by the user and remote control for EDIBON technical support, are always included.
- Totally safe, utilizing 4 safety systems (Mechanical, Electrical, Electronic & Software).
- Designed and manufactured under several quality standards.
- Optional ICAI software to create, edit and carry out practical exercises, tests, exams, calculations, etc. Apart from monitoring user’s knowledge and progress reached.

This unit has been designed for future expansion and integration. A common expansion is the EDIBON Scada-Net (ESN) System which enables multiple students to simultaneously operate many units in a network.

HCDEC/CIB. Control Interface Box:
The Control Interface Box is part of the SCADA system.
The control interface box with process diagram in the front panel.
The unit control elements are permanently computer controlled.
Simultaneous visualization in the computer of all parameters involved in the process.
Calibration of all sensors involved in the process.
- The unit control elements are permanently computer controlled.
- Control Interface Box with process diagram in the front panel.
- The Control Interface Box is part of the SCADA system.

This unit has been designed for future expansion and integration. A common expansion is the EDIBON Scada-Net (ESN) System which enables multiple students to simultaneously operate many units in a network.

DAB. Data Acquisition Board:
The Data Acquisition board is part of the SCADA system.
- PCI Express Data acquisition board (National Instruments) to be placed in a computer slot.
- Analog input: Channels = 16 single-ended or 8 differential. Resolution = 16 bits, 1 in 65536. Sampling rate up to: 250 KS/s (kilo samples per second).
- Analog output: Channels = 2. Resolution = 16 bits, 1 in 65536.
- Digital Input/Output: Channels = 24 inputs/outputs.

HCDEC/CCSOF. Computer Control + Data Acquisition + Data Management Software:
The three softwares are part of the SCADA system.
- Compatible with the industry standards.
- Flexible, open and multicontrol software, developed with actual windows graphic systems, acting simultaneously on all process parameters.
- Management, processing, comparison and storage of data.
- Sampling velocity up to 250 KS/s (kilo samples per second).
- Calibration system for the sensors involved in the process.
- It allows the registration of the alarms state and the graphic representation in real time.
- Open software, allowing the teacher to modify texts, instructions. Teacher’s and student’s passwords to facilitate the teacher’s control on the student, and allowing the access to different work levels.
- This unit allows the 30 students of the classroom to visualize simultaneously all the results and the manipulation of the unit, during the process, by using a projector or an electronic whiteboard.

Cables and Accessories, for normal operation.

Manuals:
- This unit is supplied with 8 manuals: Required Services, Assembly and Installation, Interface and Control Software, Starting-up, Safety, Maintenance, Calibration & Practices Manuals.
Exercises and Practical Possibilities to be done with the Main Items

1. Study of the compression process in a p-V diagram.
2. Study of the work performed by a two-stage compressor.
3. Determination of the efficiency of a two-stage compressor.
4. Study of the pressure ratio and the temperature ratio of a two-stage compressor.
5. Research on the relative behavior of the compressor for the electrical consumption, power of the shaft and heat losses, with and without intercooler.
6. Research on the change of the volumetric efficiency against the compression ratio, with and without intercooling.
7. Research on the change of the isothermal and/or polytrophic efficiency against the compression ratio, with and without intercooling.
8. Research on the change of the mechanical performance against the compression ratio, with and without intercooling.

Additional practical possibilities:
9. Study and analysis of the two-stage compression with intercooling by expansion.
10. Study of the two-stage compression with intercooling by heat exchanger.
11. Calculation of the inlet air dryness.
12. Study of the design and function of a two-stage compressor.
13. Determination of the intake air flow.
14. Research on the change of the air flow against the pressure ratio, with and without intercooler.
15. Study of the output power of the motor (power of the shaft of the compressor).
16. Study of the cooling between stages effect on the compressor (power and temperatures of the cycle).
17. Study of the two-stage compression effect and the interaction between stages on the energy requirements.
18. Study of the single-stage compression with cooling by expansion.
19. Study of the single-stage compression without cooling.
20. Study of the single-stage compression with cooling by heat exchanger.
22. Sensors calibration.

Other possibilities to be done with this Unit:
23. Many students view results simultaneously.
   - To view all results in real time in the classroom by means of a projector or an electronic whiteboard.
24. Open Control, Multicontrol and Real Time Control.
   - This unit allows intrinsically and/or extrinsically to change the span, gains; proportional, integral, derivative parameters; etc, in real time.
25. The Computer Control System with SCADA allows a real industrial simulation.
26. This unit is totally safe as uses mechanical, electrical and electronic, and software safety devices.
27. This unit can be used for doing applied research.
28. This unit can be used for giving training courses to Industries even to other Technical Education Institutions.
29. Control of the HCDEC unit process through the control interface box without the computer.
30. Visualization of all the sensors values used in the HCDEC unit process.
   - By using PLC-PI additional 19 more exercises can be done.
   - Several other exercises can be done and designed by the user.
PLC. Industrial Control using PLC (It includes PLC-PI Module plus PLC-SOF Control Software):

- **PLC-PI. PLC Module:**
  - Metallic box.
  - Circuit diagram in the module front panel.
  - Digital inputs (X) and Digital outputs (Y) block: 16 Digital inputs. 14 Digital outputs.
  - Analog inputs block: 16 Analog inputs.
  - Analog outputs block: 4 Analog outputs.
  - Touch screen.
- **Panasonic PLC:**
  - High-speed scan of 0.32 µsec. Program capacity of 32 Ksteps. High-speed counter. Multi-point PID control.
- **Digital inputs/outputs and analog inputs/outputs Panasonic modules.**
- **HCDEC/PLC-SOF. PLC Control Software:**
  - For this particular unit, always included with PLC supply.
  - **Practices to be done with PLC-PI:**
    1. Control of the particular unit process through the control interface box without the computer.
    2. Visualization of all the sensors values used in the particular unit process.
    3. Calibration of all sensors included in the particular unit process.
    4. Hand on of all the actuators involved in the particular unit process.
    5. Realization of different experiments, in automatic way, without having in front the particular unit. (These experiments can be decided previously).
    6. Simulation of outside actions, in the cases do not exist hardware elements. (Example: test of complementary tanks, complementary industrial environment to the process to be studied, etc).
    7. PLC hardware general use.
    8. PLC process application for the particular unit.
    9. PLC structure.
    10. PLC inputs and outputs configuration.
    11. PLC configuration possibilities.
    12. PLC program languages.
    13. PLC different programming standard languages (ladder diagram (LD), structured text (ST), instructions list (IL), sequential function chart (SFC), function block diagram (FBD)).
    14. New configuration and development of new process.
    15. Hand on an established process.
    16. To visualize and see the results and to make comparisons with the particular unit process.
    17. Possibility of creating new process in relation with the particular unit.
    18. PLC Programming Exercises.
    19. Own PLC applications in accordance with teacher and student requirements.

HCDEC/ICAI. Interactive Computer Aided Instruction Software System.

This complete software package consists of an Instructor Software (EDIBON Classroom Manager - ECM-SOF) totally integrated with the Student Software (EDIBON Student Labsoft - ESL-SOF). Both are interconnected so that the teacher knows at any moment what is the theoretical and practical knowledge of the students.

- ECM-SOF. EDIBON Classroom Manager (Instructor Software):
  - ECM-SOF is the application that allows the Instructor to register students, manage and assign tasks for workgroups, create own content to carry out Practical Exercises, choose one of the evaluation methods to check the Student knowledge and monitor the progression related to the planned tasks for individual students, workgroups, units, etc...so the teacher can know in real time the level of understanding of any student in the classroom.
  - Innovative features:
    • User Data Base Management.
    • Administration and assignment of Workgroup, Task and Training sessions.
    • Creation and Integration of Practical Exercises and Multimedia Resources.
    • Custom Design of Evaluation Methods.
    • Creation and assignment of Formulas & Equations.
    • Equation System Solver Engine.
    • Updatable Contents.
    • Report generation, User Progression Monitoring and Statistics.
- ESL-SOF. EDIBON Student Labsoft (Student Software):
  - ESL-SOF is the application addressed to the Students that helps them to understand theoretical concepts by means of practical exercises and to prove their knowledge and progression by performing tests and calculations in addition to Multimedia Resources. Default planned tasks and an Open workgroup are provided by EDIBON to allow the students start working from the first session. Reports and statistics are available to know their progression at any time, as well as explanations for every exercise to reinforce the theoretically acquired technical knowledge.
  - Innovative features:
    • Student Log-In & Self-Registration.
    • Existing Tasks checking & Monitoring.
    • Default contents & scheduled tasks available to be used from the first session.
    • Practical Exercises accomplishment by following the Manual provided by EDIBON.
    • Evaluation Methods to prove your knowledge and progression.
    • Test self-correction.
    • Calculations computing and plotting.
    • Equation System Solver Engine.
    • User Monitoring Learning & Printable Reports.
    • Multimedia-Supported auxiliary resources.
**Mini ESN. EDIBON Mini Scada-Net System.**

EDIBON Mini Scada-Net System allows up to 30 students to work with a Teaching Unit in any laboratory, simultaneously.

The Mini ESN system consists of the adaptation of any EDIBON Computer Controlled Unit with SCADA integrated in a local network. This system allows to view/control the unit remotely, from any computer integrated in the local net (in the classroom), through the main computer connected to the unit.

Main characteristics:
- It allows up to 30 students to work simultaneously with the EDIBON Computer Controlled Unit with SCADA, connected in a local net.
- Open Control + Multicontrol + Real Time Control + Multi Student Post.
- Instructor controls and explains to all students at the same time.
- Any user/student can work doing "real time" control/multicontrol and visualisation.
- Instructor can see in the computer what any user/student is doing in the unit.
- Continuous communication between the instructor and all the users/students connected.

Main advantages:
- It allows an easier and quicker understanding.
- This system allows you can save time and cost.
- Future expansions with more EDIBON Units.

The system basically will consist of:
- This system is used with a Computer Controlled Unit.
- Instructor’s computer.
- Students’ computers.
- Local Network.
- Unit-Control Interface adaptation.
- Unit Software adaptation.
- Webcam.
- Mini ESN Software to control the whole system.
- Cables and accessories required for a normal operation.

Specifications subject to change without previous notice, due to the convenience of improvement of the product.
